

# Introduction

TecDev is proud to be design as a Glass Expansion official dealer. We are very pleased to offer you this catalogue dedicated to your ICP model. As is consistent with our ongoing commitment to provide the highest level of customer support possible, this catalogue is intended to help simplify your task of selecting sample introduction components that are most suitable to your ICP-OES and ICP-MS applications. Except items specified in catalogue, all products are from Glass Expansion.

Glass Expansion catalogue represents the widest range of sample introduction components for ICP emission and mass spectrometers. Today, Glass Expansion support both new and old instruments for 13 different manufacturers, representing sample introduction systems for over 50 different ICP-OES and ICP-MS models. The combination of listening to customers and innovative thinking has seen Glass Expansion successfully overcome many of the commonly encountered application issues even with the toughest samples. Innovative new designs include the high sensitivity SeaSpray nebulizer, the low uptake MicroMist nebulizers, the high throughput Cinnabar mini-cyclonic spray chamber and the most recent Hydra-Trace kit that offers outstanding Hg detection on limited sample volumes. Our quality, attention to detail and customer focus has not only attracted the attention of world renowned experts with their publications, but also resulted in Glass Expansion establishing itself as a major OEM supplier to the ICP manufacturers.

As always, we rely on your feedback. If you wish to provide any input on how we can improve this catalogue or our products and services, please feel free to contact us.
